

## IMPORTANT PRODUCT INFORMATION

Ivančna Gorica, 23<sup>rd</sup> March 2017

Dear Customer,

Thank you for choosing **Akrapovič Honda CRF1000L Africa Twin Optional Header set (E-H10R5)** for your bike.

With each Akrapovič system you get the very latest technology and innovation from our R&D department, as we're always looking to provide you with the best possible riding experience and performance.

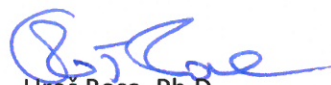

After further fitment evaluation of the Optional Header set (E-H10R5) on Honda CRF1000L Africa Twin model, we determined that it is possible for header assembly to come in contact with front mudguard when shock absorbers are nearly fully low pressed, causing heat damage to it.

Hence get in touch with the Akrapovič dealer from where you bought the above system, to arrange a date and time to exchange the parts on your bike at your earliest convenience, **until May 30, 2017, at the latest. The replacement of the system will be at no additional cost for you.**

In the meantime, to ensure your continued safety, we recommend replacing the current **Akrapovič Optional Header set (E-H10R5)** system with your stock Header set until the new Akrapovič Header set is provided.

Thank you very much for your understanding and we do apologise for causing any inconvenience.

Kind regards,

Uroš Rosa, Ph.D.
