Porsche 997 GT3

Akrapovič Evolution Race Exhaust system Porsche 997 GT3 and GT3 RS

The Akrapovič Evolution Race Exhaust system connects titanium headers with integrated 100 cpsi metallic catalyts with the ultra light Sports Cup system without compromise and now represents our maximum power increase at the lowest weight configuration.

Because of the achieved weight reduction of 29 kg in the most critical area of the Porsche 911, behind the engine and rear axle, the weight distribution of the car is noticeably improved, which also enables better handling. The limit range of the car increased and higher side acceleration is now possible. The performance of the GT3 will clearly be increased by the combination of better power/weight ratio, the increase of torque for about 23 Nm and much better handling.

Sound characteristics of this configuration are much more aggressive, but still allowed by Porsche Sports Cup regulations.

Included in a delivery:

- titanium rear muffler, homologated
- titanium tail pipes, homologated
- titanium headers with 100 cpsi catalyts
- titanium link pipes

Hard facts:

- plus 16.5 HP (approx. 4490 rpm)
- 23 Nm plus (approx. 4128 rpm)
- minus 29 kg

Hard facts:
Titanium, 16.5 HP plus, 23 Nm plus, 29 kg minus
